Zhiheng (Kevin) Li

li004628@umn.edu | +1 (612) 283-4843 | Minneapolis, MN | github.com/ZhihengLi0

EDUCATION

University of Minnesota, Twin Cities Minneapolis, MN

*Bachelor of Science in **Mathematics** • **Computer Science Minor***

Expected May 2028

- **GPA:** 4.0/4.0 | **Honors:** Dean's List, Fall 2025, Spring 2026 · Tau Sigma Honor Society
- **Relevant Coursework:** Calculus I, II & III, Linear Algebra & Differential Equations, Applied Linear Algebra, Proof-Based Sequences & Series, Physics for Scientists and Engineers I & II, Programming in Python and Java, Introduction to Algorithms & Data Structures, Introduction to Statistical Analysis, Cryptology & Number Theory
- **Directed Reading Program (Fall 2026):** Measure and Integral: An Introduction to Real Analysis (Wheeden & Zygmund, 2nd ed.) — foundations for Optimal Transport, with mentor Anisha Jain, Ph.D. student in Mathematics, University of Minnesota

RESEARCH EXPERIENCE

SuperCDMS Dark Matter Experiment - School of Physics & Astronomy, University of Minnesota Minneapolis, MN

SuperCDMS Researcher & Research Assistant to Prof. Yan Liu, UROP Fellow Oct 2025 - Present

• Built **cdms_spotlight**, a multilingual natural-language query system for the SuperCDMS DQM database hosted at **SLAC**: server-side filtering scaling from ~1,300 to ~100,000 series, cuts on any of 10,929 ODB parameters per series, self-learning local NLP (TF-IDF + logistic regression); runs continuously as a Slack bot in the official collaboration workspace, pip-installable CLI; presented at the SuperCDMS Software Meeting on July 14, 2026; contributed to the follow-up DQM/ODB upgrade, prompted by cdms_spotlight, that moves non-metadata parameter cuts server-side so queries no longer pull data to the client. Jul 2026

SNOLAB Run 4 Phonon Pulse Analysis May–Sep 2026

• Built the **phonon pulse template pipeline** for 13 SNOLAB R4 detectors (12 phonon channels each): event selection around the 10.37 keV activation line (~120 GB raw traces), free-pretrigger 2-exponential fits with quality cuts; the 1×1 and PCA N×M ROOT templates serve as the R4 pulse templates for optimal-filter reprocessing; presented at the SuperCDMS Analysis Working Group meeting on July 29, 2026. May–Jul 2026

• Measured the **phonon collection efficiency** of detector Z7: converted every K-line pulse from current to power with the TES electrothermal equations and integrated the fitted pulse in closed form, validated against the official absorbed-energy RQ; presented at the SuperCDMS Analysis Working Group meeting on September 23, 2026. Jul–Sep 2026

• Built **BlueFors-Alert**: minute-level PostgreSQL sync of the 64 GB CS2 database to a Raspberry Pi; Slack monitor with dual IDLE/COLD thresholds and time-range plots of any sensor; extended to a liquid-nitrogen scale. Jul 2026

• Extended RuOx (R31279 & R31839) **calibration curves** to 5 mK–300 K (PCHIP + Mott VRH); the generated .340 files are now in use on the lab's BlueFors dilution refrigerator. May 2026

• Built a **Python pipeline** for LED calibration data from 11 cryogenic Ge channels (5,200+ events, 10+ GB raw): baseline subtraction, SNR-based glitch detection, peak alignment, exponential fitting. Oct 2025

Mouse Eye Tracking for Neural Alignment - Deisseroth & Mitra Labs, Stanford University Remote

Research Collaborator (remote), with Kaiwen Sheng, Ph.D. student in Bioengineering Aug 2026 - Present

• Set up eye keypoint tracking with **DeepLabCut** for infrared videos of mice recorded over multiple days (eight points: pupil ellipse, eyelids, eye corners); fixed the training recipe on the first video by controlled experiments with held-out test frames: batch size by validation loss, ResNet-50 among five backbones by test error and confidence, and the "jump" rule, best of three, for picking frames to correct; then defined every keypoint precisely for all later experiments. Aug–Sep 2026

• Ran **active learning on 19 videos from 3 mice**: fixed test and validation frames per video, first 20 training frames by k-means on image appearance, then 20 frames per step where the jump rule finds unstable tracking, pre-labeled, corrected and retrained from scratch, until two steps improve the error by under 3 %. Most videos saturated at 20–40 labels; a new mouse needs its own labels (208 px to 10.4 px with 20) but starts better with every mouse seen; adding videos did not degrade earlier ones; 5 or 10 labels, checked with two subsets each, cannot replace 20. All data and scripts organised so that every step reproduces. Sep–Oct 2026

• Chose the **pupil-area rule** by comparing nine candidates against human ellipse labels on all test frames (four-point ellipse best, median filtering does not help) and built a per-frame **blink rule**: one eyelid-distance threshold per mouse set on frames judged by eye, pupil confidence as fallback; both run frame by frame, unsmoothed, for alignment with brain recordings. Oct 2026

• Now: **finding the frames whose tracking cannot be trusted** without new labels, and fixing only those frames. Oct 2026

RESEARCH & INDUSTRY EXPERIENCE

Low-Carbon Transition & Industrial Monitoring Platform **Beijing / Shanghai, China**

Faculty-led Researcher (research phase) → Algorithm Engineer (industry phase), Shanghai Huaruizhongxin Technology Co., Ltd.

Oct 2024 - May 2025; Aug 2026 - Sep 2026

• Contributed to a faculty-led low-carbon transition project for China's steel industry, supporting a proposal and implementation plan for national ministry consideration through data collection, database construction, and quantitative analysis.

• During the industry implementation phase, contributed to an energy and carbon-emissions monitoring platform by designing an algorithm prototype for industrial time-series data quality governance, translating meter/point metadata and quality flags into rules for cumulative, instantaneous, consumption, enumeration, and statistical measurements.
• Implemented historical and real-time cleaning for range, constant, trend, missing-data, and communication anomalies; used same-time historical profiles for outage imputation and cumulative-to-consumption attribution; validated multi-day data with plots and regression tests, then packaged and delivered the work.

SELECTED PROJECTS

College Students Entrepreneurial Project & Entrepreneurship Roadshow Beijing, China
Team Leader Oct 2024 - Jun 2025

- Led a student team to design **a billiards rest** that combines the high and low bridge heads into one;
- Took it from CAD model to 3D-printed prototypes, iterating through player testing and market research; received **national project approval with seed funding**; **Chinese utility patent** under CNIPA review.
- Invited to present at the **Tsinghua X-Lab & Kering Entrepreneurship Roadshow** to industry leaders.

AWARDS & HONORS

- **UROP** (Undergraduate Research Opportunities Program) Fellowship, University of Minnesota, Summer 2026
- **1st Prize**, Beijing University Student Innovation & Entrepreneurship Competition (Science & Technology Track)
- **1st Prize**, National College E-Commerce "Innovation, Creativity & Entrepreneurship" Challenge, Campus Level | Team Leader
- **3rd Prize**, China International College Students' Innovation Competition, Campus Level (2025) | Team Leader
- **2nd Prize**, NECCS National English Competition for College Students

ACTIVITIES & SERVICE

- **Special Olympics USA Games Minnesota 2026**, Tennis Division - Volunteer Ball Retriever | June 25, 2026
- **Chinese Student Union**, UMN - Active Member | Oct 2025 - Present
- **Chinese Students & Scholars Association**, UMN - Volunteer Calculus I Tutor | 2025 - Present
- **College Table Tennis Club / Football Club / Guitar Club** - Team Member | 2023 - 2024

PROFESSIONAL SKILLS

- **Techniques:** Cryogenic instrumentation, signal processing, data pipeline development, thermometer calibration curve fitting, real-time PostgreSQL sync, local NLP, Slack bot development, waveform template construction, keypoint tracking, active learning
- **Tools:** Python (NumPy, Pandas, SciPy, Matplotlib), scikit-learn, DeepLabCut, PyTorch, PostgreSQL, Java, ROOT, Git, Linux, Slurm, MSI HPC (Agate)
- **Languages:** Mandarin Chinese (Native), English (Fluent; IELTS 7.0)
